AACR2 AND RDA COMPARISON

While we follow standard RDA practices, we understand that examples provided in this document may not fit the needs of all libraries and local cataloging practices may take precedence over formal standards.

We are committed to providing cataloging records under the variant cataloging policies that best fit the needs of local individual institutions.

EXPLANATION OF A VARIATION

Source Material: *Advancing Medical Practice through Technology*

MARC Field	Original Cataloging: AACR2	AACR2 Record with Automated RDA Enrichment	Original Cataloging: RDA
260	▼a Hershey, Pa. : ▼b Medical Information Science Reference, ▼c 2014.		
264 1		▼a Hershey, Pa. : ▼b Medical Information Science Reference, ▼c 2014.	▼a Hershey, PA : ▼b Medical Information Science Reference, ▼c [2014]

In the records noted above, “Pa.” is one of two elements with a variation between the record types.

- The enriched record (middle column) maintains the state abbreviation as “Pa.” since this is the *RDA approved* abbreviation for Pennsylvania.
- In the original RDA record (right column), the cataloger likely transcribed the data exactly as found on the item in hand.

Both records follow *PCC Guidelines for Enhancing & Editing non-RDA Monograph Records*.

In the second variation, “2014”, is shown without brackets and *with* brackets.

- The enriched record (middle column) applies updates where necessary. In this case, the year “2014” remains the same as the original AACR2 record. If the original AACR2 record had indicated “[2014]”, the RDA enriched record would also show “[2014]”.
- In the original RDA record, the date is in brackets because it has been supplied by the cataloger or has been sourced from somewhere other than the title page.
